

# MATH 318, Assignment 3

Due date: October 11

1. (4 points) Write truth tables of the following formulas. Which of them are tautologies?

(A)  $(\neg p) \rightarrow q$ ,

(B)  $(p \wedge q) \vee (\neg p)$ ,

(C)  $p \rightarrow ((\neg p) \rightarrow q)$ ,

(D)  $q \vee (p \rightarrow (q \wedge (p \rightarrow q)))$ .

2. (2 points) Devise formulas (using connectives amongst  $\vee$ ,  $\wedge$  and  $\neg$ ) and switching circuits (using gates amongst OR, AND and NOT) which realize each of the following Boolean functions:

(A)

$q \backslash p$	0	1
0	1	1
1	0	1

(B)

$q \backslash p$	0	1
0	0	1
1	1	1

3. (2 points) Write DNF and CNF formulas equivalent to the formula  $((p \vee \neg q) \wedge (r \vee p)) \vee r$ .
4. (1) (1 point) Write a formula equivalent to  $p \rightarrow q$  using only the connective NAND,  
(2) (1 point) Write a formula equivalent to  $(p \wedge q) \vee \neg p$  using only the connective NOR,
5. (2 points) Consider the formula

$$(\dots((p \rightarrow p) \rightarrow p) \rightarrow \dots) \rightarrow p,$$

where the variable  $p$  occurs  $n$  many times. For which  $n$  is the above formula a tautology? Justify your answer.

6. (4 points) Suppose  $\varphi$  is a formula written using only the biconditional connective  $\leftrightarrow$  (besides variables and parentheses). Show that  $\varphi$  is a tautology if and only if every variable occurs in  $\varphi$  an even number of times.

7. (2 points) Using Karnaugh maps, find a formula realizing the following Boolean function  $f$  with 4 variables  $p, q, r, s$ :

$p$	$q$	$r$	$s$	$f(p, q, r, s)$
0	0	0	0	1
0	0	0	1	1
0	0	1	0	1
0	0	1	1	1
0	1	0	0	1
0	1	0	1	1
0	1	1	0	0
0	1	1	1	0
1	0	0	0	1
1	0	0	1	1
1	0	1	0	1
1	0	1	1	1
1	1	0	0	1
1	1	0	1	1
1	1	1	0	0
1	1	1	1	0

The following problems are for extra credit.

- 8\*. (4 points) Show that the set  $\{\vee, \wedge\}$  is not complete.

- 9\*. (4 points) Show that the set  $\{\text{XOR}\}$  is not complete.
